

Acvatix™

PICV PN16/PN25 with flanged connections

PN16: VPF43../VPF44.., PN25: VPF53../VPF54..

VPF44../VPF54..

VPF43../VPF53..

Pressure Independent Control Valves (PICV)

- With integrated pressure differential controller
- Valve body made of gray cast iron GJL-250 or nodular cast iron GJS-400
- Available in the range from DN 50 to 200
- Volumetric flow 15 to 280 m³/h nominal, with presetting
- Equipped with pressure test points P/T
- Can be equipped with SAX..P., SAV..P.. or SQV..P.. electromotoric actuators

Use

- For use in heating, ventilation and air conditioning systems, district heating, as a control valve
- For closed circuits

Notes:

When valve installed with stem horizontally, the flow rate will reduce by about 5 %.

DN = Nominal size

H₁₀₀ = Nominal stroke

V₁₀₀ = Volumetric flow through fully open valve (H₁₀₀)

V_{\min} = Smallest pre-settable volumetric flow through fully open valve (H_{100})

ΔP_{\min} = Minimum differential pressure required across the valve's control path, so that the differential pressure regulator works reliably

Ordering

PICV valve, actuator must be ordered separately.

When ordering please specify the quantity, product name and type code.

Example:

Product number	Stock number	Designation
VPF44.65F25	S55266-V176	PICV PN 16 with flanged connections

Delivery

- PICVs, actuators and accessories are packed and supplied separately.
- The valves are supplied without counter-flanges and without flange gaskets.

2	Aperture for the differential pressure controller is linked with outlet port B
3	Differential pressure controller
4	Plug with variable presetting opening
5	Control valve
6	Pressure test point (P/T) at outlet port B, blue ribbon, p_3
7	Pressure test point (P/T) at inlet port A, red ribbon, p_1
A	Inlet port A
B	Outlet port B

Functional principle

The PICVs VPF43../VPF44../VPF53../VPF54.. combine three functions:

- a control valve for controlling the volumetric flow
- an adjustable mechanism with a dial for a pre-settable maximum volumetric flow
- a DPR for balancing pressure fluctuations in the hydraulic system respectively across the control valve

The mechanical series-connected differential pressure controller keeps the differential pressure ($p_1 - p_2$) constant across the control valve and thus the volumetric flow too. The desired maximum volumetric flow V_{100} can be preset with the adjusting mechanism. The controller (not shown) and the actuator regulate the volumetric flow and consequently the desired temperature in buildings, rooms or zones.

p_1	P/T port with red ribbon, pressure test point at inlet port A of PICV
p_2	P/T port with blue ribbon, pressure at outlet port of control valve (3)
p_3	P/T port with blue ribbon, pressure test point at outlet port B of PICV

Medium flow

The medium entering the PICV (inlet port A) first passes through the control valve (3) with a linear characteristic and a stroke of 20 mm (DN 50...80) respectively 40 mm (DN 100...125) and 43 mm (DN 150...200). The actuator (not shown here) opens or closes accurately the control valve. Then, the medium flows through the variable presetting opening which is connected to the ring with dial (1) for presetting the desired maximum volumetric flow V_{100} .

Before leaving the PICV (outlet port B), the medium passes through a built-in mechanical differential pressure controller. This differential pressure controller is the heart of the PICV and ensures that the selected volumetric flow is maintained across the whole working range and independent of the inlet pressure p_1 .

Pressure test points

The PICV VPF44../VPF54.. are equipped with three pressure test points (p_1 , p_3 , p_2) for measuring and monitoring the differential pressure across the control valve and PICV during commissioning or for analysis during operation. The PICV VPF43../VPF53.. are equipped with two pressure test points (p_1 , p_3) for measuring and monitoring the differential pressure across the valve during commissioning or operation. For that purpose, the electronic manometer ALE10 can be used.

Manual control

Only possible with mounted actuator.

Advantages

The advantages of PICVs are that:

- Once the flow limiter (presetting) is set to the desired nominal flow, the hydraulic circuit is self-balanced, even when changes to the system are made, such as additions.
- For any heat or cold demand the PICV with mounted actuator can be set to the desired volumetric flow and will be relatively constant regardless of pressure fluctuations in the system.

Constant flow regardless of pressure changes in the system reduces hydraulic interdependence between hydraulic groups and leads to a more stable control.

Notes: PICV can't be used as flow limiting valve without an actuator mounted on top.

Sizing

Engineering Example

$$\dot{V} = \frac{Q[\text{kW}] \cdot 1000}{1.163 \cdot \Delta T[\text{K}]} \left[\frac{\text{l}}{\text{h}} \right]$$

Basis of design

1. Determine heat/cold demand Q [kW]
2. Determine temperature spread ΔT [K]
3. Calculate volumetric flow
4. Select suitable PICV VPF43../VPF44../VPF53../VPF54..
5. Determine dial setting using volumetric flow/dial presetting tables, see below.

Example

1. Heat demand Q = 150 kW
2. Temperature spread $\Delta T = 6$ K
3. Volumetric flow

$$\dot{V} = \frac{150 \text{ kW} \cdot 1000}{1.163 \cdot 6 \text{ K}} = 21'654 \text{ l/h} = 21.6 \text{ m}^3/\text{h}$$

Hint: You can also determine the volumetric flow using the valve slide rule.

4. PN class: PN 16
5. Select PICV VPF44., PN 16
Ideally, PICVs should be selected such that they operate at about 80% of their maximum flow, enabling them to deliver spare capacity, if required.
Selections:
VPF44.65F25 $\Delta p_{\min} = 25$ kPa
VPF44.65F35 $\Delta p_{\min} = 40.5$ kPa
6. Determine dial setting using volumetric flow/dial presetting tables:
VPF44.65F25 Volumetric flow 21.6 m³/h
Dial setting 3.7
VPF44.65F35 Volumetric flow 21.6 m³/h
Dial setting 2.5

Volumetric flow/dial presetting

Tables to determine the dial setting for a desired volumetric flow.

Δp_{\min} [kPa] based on volumetric flow; interpolate missing values.

	Presetting range linear to VDI/VDE 2173
-	Presetting range not permitted

Notes

Safety

⚠ CAUTION

National safety regulations

Failure to comply with national safety regulations may result in personal injury and property damage.

- Observe national provisions and comply with the appropriate safety regulations.

Y, Z	Positioning signal		
H	Stroke		
V	Volumetric flow		
—	Acting direction: Direct		
- - -	Acting direction: Reverse		

⚠ WARNING

The direction of flow indicated (arrow on the valve body) is mandatory!

The valves should preferably be mounted in the return pipe where temperatures are lower (for heating circuits), and where the sealing gland is less affected by strain.
Valve's factory default position (without actuator) = CLOSED.

Symbol

Symbol used in catalogs and application descriptions	Symbol used in diagrams
	There are no standard symbols for PICVs in diagrams

Recommendation

- A strainer or dirt trap should be fitted upstream of the valve to enhance reliability and service life.
- Remove dirt, welding beads etc. from valves and pipes.
- Do not insulate the actuator bracket, as air circulation must be ensured!
- If flow measurement section is used (VPF44../VPF54.. only), make sure the flow measuring device is installed in a low turbulence area. In general, use the $5 \times \text{DN} / 10 \times \text{DN}$ rule, whenever possible and maintain a distance of more than $10D$ from the pump.

Mounting

- PICV and actuator can easily be assembled on site. Neither special tools nor adjustments, besides flow rate presetting are required.
- The valve is supplied with Mounting Instructions A6V11464512.

Orientation

Direction flow

Pay attention to the valve's flow direction symbol during mounting.

Presetting

It is recommended to mount the actuator before the presetting is made.

1. Mount actuator and fix valve neck coupling
2. Mount valve stem coupling and tighten slightly
3. Make presetting according to table under "Volumetric flow / dia presetting". Do NOT adjust presetting to a dial reading lower than "0.6".
4. Tighten stem coupling

VPF44../VPF54.. (  \dot{V} [m³/h],  8 mm)

VPF44../VPF54.. has a symmetric pre-setting scale for easy commissioning. Identical pre-setting positions give identical flow rate.

VPF43../VPF53.. (  \dot{V} [m³/h],  8 mm)

Valve characteristic

Volumetric flow V / V_{100}

Stroke H / H_{100}

Working pressure and medium temperature

Medium temperature [°C] for VPF44../VPF54..

Medium temperature [°C] for VPF43../VPF53..

Working pressure and medium temperature staged as per ISO 7005.

⚠ WARNING	
	Current local legislation must be observed.

Commissioning

NOTICE	
	<ul style="list-style-type: none"> • Consequences The valves must be commissioned with the actuator correctly fitted. Strong pressure impacts can damage closed PICVs. • The valves must be open when flushing or pressure testing the system. Strong pressure impacts can damage closed PICVs. • Differential pressure Pmax across the valve’s control path is not allowed to exceed 800 kPa. • Valve’s factory default position (without actuator) = CLOSED.

Maintenance

All VPF.. PICVs are maintenance-free. Maintenance for VPF44../VPF54.. allows easy exchange of the differential pressure controller (DPR).

WARNING

When performing service work on the valve or actuator:

- Switch off the pump and disconnect power supply.
- Close the shut-off valves in the piping network.
- Fully reduce pressure in the piping network and allow the pipes to cool down completely.
- Remove the electrical connections only if necessary.

Sealing gland

The stem sealing gland cannot be exchanged. In case of leakage the whole valve must be replaced.

Disposal

The valve is considered an electronic device for disposal in accordance with European guidelines and may not be disposed of as domestic waste.

- Dispose of the valve through channels provided for this purpose.
- Comply with all local and currently applicable laws and regulations.

Warranty

Technical data on specific applications are valid only together with Siemens products listed under "Equipment combinations". Siemens rejects any and all warranties in the event that third-party products are used.

Functional data			
PN class	PN 16 / PN 25 as per EN 1333		
Permissible operating pressure	1600 kPa (16 bar) / 2500 kPa (25 bar) as per ISO 7628 / EN 1333 Max. differential pressure: 800 kPa Min. differential pressure: see Volumetric flow/dial presetting [► 12]		
Valve characteristic	Linear as per VDI / VDE 2173		
Leakage rate	Class IV (0...0.01 % of volumetric flow V_{100}) to EN 1349		
Operating direction	Valve stem retracts (pushed down) to close Valve stem extends (pulled up) to open		
Permissible media	Low temperature hot water, medium temperature hot water, chilled water, water with anti-freeze Recommendation: water treatment to VDI 2035		
Medium temperature	PN 16, PN 25	DN 50...150: 1...120 °C DN 200 1...110 °C	
Rangeability	1:100		
Average flow accuracy*	± 10 %	from Δp_{min} up to 70 kPa from Δp_{min} up to 105 kPa from Δp_{min} up to 800 kPa	(DN 50...80) (DN 100...150) (DN 200)
	± 5 %	from 70...800 kPa from 105...800 kPa	(DN 50...80) (DN 100...150)
Nominal stroke	DN 50, 65, 80: 20 mm DN 100, 125: 40 mm DN 150, 200: 43 mm		
Low-noise operation	To operate the valve at a low noise level, a differential pressure of 150 kPa should not be exceeded.		

* Tested in clean water conditions, represents the maximum deviation from the average measured flow

Materials	
Valve body	DN50...100 (PN16): Gray cast iron GJL-250 DN50...100 (PN25), DN125...200 (PN16/PN25): Nodular cast iron GJS-400-18RT
Stem, spring	Stainless steel
Sleeve	Brass
Regulator	Stainless steel
Seals	EPDM

Humidity	5...95 % r. h.	<95 % r. h.	5...95 % r. h.

Dimensions/weight	
Dimensions	See Dimensions [► 23]
Weight	See Dimensions [► 23]
Flange connections	ISO 7005-2
Pressure test points (P / T points)	G ¼ inch (connection) 2 mm x 40 mm (measuring tips)

Application examples

PICVs in HVAC systems combined with variable speed pumps provide even higher energy efficiency. When sizing the pump, it must be made certain that the most critical branch or consumer in the system – usually the remotest from the pump – gets enough pressure (pump head). Thus, it is recommended to use a variable speed pump in constant-pressure mode with end-point feedback, to maintain a minimum differential pressure across the critical valve.

Residential buildings

Residential buildings with for example self-contained flat heating systems:

Dimensions in mm: VPF44../VPF54..

Dimensions in mm: VPF43../VPF53..

Note:

- DN = Nominal size
- H = Total actuator height plus minimum distance to the wall or the ceiling for mounting, connection, operation, maintenance etc.
- H1 = Dimension from the pipe center to install the actuator (upper edge)
- H2 = Valve in the «OPEN» position means that the valve stem is fully extended.
